Community Whitepaper | Version 1.0

ABSTRACT

$KDOLLAR is a community meme token dedicated to fundraising for KaspaDollar, the proposed $KSD stablecoin on Kaspa. The project combines Kado artwork, community discussion and shared participation with a direct funding objective: support the work of building a decentralized dollar on Kaspa. One hundred percent of $KDOLLAR trading fees generated on KaspaRocket.fun are sent directly on-chain to the KaspaDollar Initiative wallet with every trade. Partner fee donations and direct $KAS contributions provide additional support. This paper describes the community's purpose, funding routes, public progress view and ways to participate.

1 INTRODUCTION

Our goal is to help fund the dollar on Kaspa. Meme culture gives people a reason to create, share and return; $KDOLLAR channels that participation toward KaspaDollar's development fundraiser. Art and conversation introduce the mission, while trading fee contributions and direct donations connect community activity to financial support.

The $KDOLLAR community's role is fundraising and awareness. KaspaDollar is responsible for its stablecoin design, development and use of the funds it receives. The stablecoin's technical specifications are set out in KaspaDollar's own whitepaper. [1]

1.1 Project identity

Table 1. Project identifiers

Field	Project reference
Community token	$KDOLLAR
Network and standard	Kaspa Layer 1 | KCC-20
Contract address	`e5554a63a0fddf927fce200d55d7019e102d664c6d735063a7277936dc680a2c`
Website	https://kdollar.space

The full contract address identifies $KDOLLAR. Match it against the linked KaspaRocket listing when accessing the token's market. [3]

2 THE DEVELOPMENT FUNDRAISER

KaspaDollar proposes a decentralized stablecoin backed by $KAS collateral on Kaspa L1. Its design combines covenant vaults with a miner price oracle whose updates are verified using zero-knowledge proofs. The published technical paper is a working document awaiting peer review. [1]

The official fundraiser targets 5,000,000 $KAS and closes on January 1, 2027. Its published plan allocates 72% to development, representation and marketing, and 28% to independent audit work, review of fixes and a public bug bounty. KaspaDollar publishes outgoing fundraising transactions at the end of each month. [2]

Table 2. Published fundraiser allocations

Share	Amount	Published purpose
72%	3,600,000 $KAS	Development, representation, and marketing
28%	1,400,000 $KAS	Independent audit, review of fixes, and bug bounty

2.1 Development wallet and donation names

The KaspaDollar project wallet receiving development contributions is: [2]

`kaspa:qpy0rvs9mkfa66vnhre4dwsc4c0nu8jhvk0jlfzvq7x8pejjezpujpyrwecl6`

The $KDOLLAR team purchased kdollar.kas and kdollar.k to make fundraising easier and transferred both names to the KaspaDollar development fund wallet. These names provide aliases for the development fund's $KAS address in compatible wallets.

Direct donations go to this wallet and follow KaspaDollar's published contribution terms. Verify the complete address on kaspadollar.com before sending. [2]

3 TRADING FEE CONTRIBUTIONS

3.1 Trading fee commitment

One hundred percent of $KDOLLAR trading fees generated on KaspaRocket.fun are sent directly on-chain to the KaspaDollar Initiative wallet with every trade. This commitment connects $KDOLLAR trading activity with the stablecoin development fundraiser.

The contribution is the trading fee associated with a transaction. The amount spent purchasing tokens and the fee donated to the fundraiser are separate amounts.

3.2 Partner fee donations

Trades routed through partner wallets or bots can have a separate fee path. Kaspire receives 33% of the applicable

trading fee as its partner share and has committed to forward its $KDOLLAR-related share manually to the KaspaDollar development wallet. [7]

Dagger has also committed to forwarding its $KDOLLAR-related partner fees. GoonBoyCrypto confirmed that the Dagger contributions he coordinates will be sent every seven days. These partner commitments extend the fundraising effort beyond direct KaspaRocket trading. [7]

4 COMMUNITY PARTICIPATION

4.1 Art and shared identity

Kado, the coin's dollar face and rocket reverse, and the project's visual language give the community a recognizable identity. Memes, illustrations, short videos and social posts introduce the fundraiser to people who might otherwise miss the technical work. The project's social artwork carries the contract address and market link so viewers can find the same token and its published resources.

4.2 Education and conversation

The community shares KaspaDollar's whitepaper and development updates, discusses the usefulness of a decentralized dollar on Kaspa, and helps people find the original sources. Public questions and reasoned responses give newcomers a way to understand the proposal and decide how they want to participate.

4.3 Ways to take part

Participation includes creating art, sharing the fundraiser, translating explanations, introducing the project to other communities, discussing the published research, donating $KAS directly, and voluntarily trading $KDOLLAR. The project website, X account and Telegram group connect these activities with current community updates. [4–6]

5 PUBLIC FUNDRAISING PROGRESS

The fundraising view at kdollar.space presents the current KaspaDollar development wallet balance, $KAS receipts attributed to $KDOLLAR activity, and the associated transaction count. The wallet balance is read from Kaspa address data; attributed receipts use KaspaRocket's reporting API. These figures describe the funds held and the contribution associated with the meme token. [4]

The progress percentage compares the development wallet balance with the 5,000,000 $KAS goal. Fee donations already received are included in that balance. The attributed fee total identifies their source and is not added to the wallet balance a second time. A partner fee and its later forwarding to the beneficiary likewise represent successive stages of one contribution.

6 PARTICIPATION AND RISK

$KDOLLAR is a community meme token whose market price and liquidity can change sharply. The fundraising mission makes no promise of financial returns, rewards or an allocation of KSD to token holders. Token purchases and direct donations to the development fund are separate forms of participation.

KaspaDollar's proposed stablecoin carries development, oracle, collateral and adoption risks. Fundraising does not guarantee deployment or a maintained dollar peg. Direct contributions follow KaspaDollar's published refund terms; token purchases receive no refund promise through this paper. [1, 2]
